PROFESSIONAL EXPERIENCE

Suitmedia, Bandung   July – December 2023
Mobile Developer (Freelance)
- Contribute the development of the Grha Kedoya App from the initial stages, starting from zero to the release of Batch 1, participated in team meetings to discuss project progress, challenges, and solutions, help senior developer create technical documentation.
- Facilitated a smooth handover of the projects to colleagues for ongoing maintenance and future development.
- I learned and applied Flutter Getx Suitmedia's architectural guidelines in my client project work.

Suitmedia, Yogyakarta   February – June 2023
Mobile Developer (Internship)
- Developed app onboarding tasks using Flutter framework, implemented GetX for state management to enhance the app's efficiency.
- Contributed to bug fixing activities on the Wika PPID App, collaborated with the development team to identify and resolve issues promptly.
- Played a key role in the development of the We Care app for Astra Daihatsu (Client), contributed to the enhancement of the app by developing new features, specifically worked on the implementation of the canteen feature.
- Worked closely with the development team to ensure effective communication and collaboration, participated in team meetings to discuss project progress, challenges, and solutions.

EDUCATION

Amikom Yogyakarta University**,** Indonesia   2020 - 2024
Bachelor of Science in Computer Science

PROJECTS

WVaccine Mobile App *github* | *Flutter, Provider State Management*
Developed a mobile application using Flutter, collaborating with backend API integration. Contributed to UI/UX design and quality assurance. This project served as the capstone project during my time at Alterra Academy.

Weather App *github* | *Flutter, Bloc State Management*
Built a Flutter weather app using OpenWeather API. Organized code with clean architecture, Bloc state management, and dependency injection. Added localization and cache for improved user experience. Conducted unit and widget tests for reliability.

Amikom Pedia Api github | *Go, PostgreSQL, CI/CD , AWS ECR, AWS RDS*
A project involving the development of an API for the Amikom Pedia app and web platform. Currently in progress, collaborating with other teams specializing in frontend, UI/UX, and mobile development.
